

### CLAIM LISTING

The following claim listing is provided for the sake of convenience to the Office as requested by the MPEP.

1. (original): A method comprising:

associating a first entity with a second entity in a first device; and  
selectively providing information about the association of the first  
and second entities to a second device as directed by the first entity, without  
requiring the second entity to be operatively associated with either the first  
or second device.

2. (original): The method as recited in Claim 1, wherein the first entity and  
the second entity are selected from a group of entities that includes  
users, organizations, companies, devices, computers, servers, computer  
programs, and applications.

3. (original): The method as recited in Claim 1, wherein the first entity  
includes a first user, the second entity includes a second user, and  
wherein without requiring the second entity to be operatively associated  
with either the first or second device includes without requiring the  
second user to be logged in to either the first or second device.

4. (original): The method as recited in Claim 1, wherein selectively  
providing information about the association of the first and second  
entity to the second device further includes providing the second device

1 with a validation code that identifies the first entity and the second  
2 entity, when the first entity is operatively associated with the second  
3 device.

4  
5 5. (original): The method as recited in Claim 4, wherein the validation  
6 code identifies the second entity by an identifier and a name.

7  
8 6. (original): The method as recited in Claim 5, wherein the validation  
9 code identifies modifications to a consent parameter associated with the  
10 second entity.

11  
12 7. (original): The method as recited in Claim 4, wherein providing the  
13 second device with the validation code further includes encrypting at  
14 least a portion of the validation code.

15  
16 8. (original): The method as recited in Claim 1, wherein associating the  
17 first entity with the second entity in the first device further includes  
18 logically associating a first entity profile with a second entity profile.

19  
20 9. (original): The method as recited in Claim 3, wherein the first entity is a  
21 parent/guardian of the second entity.

22  
23 10. (original): The method as recited in Claim 1, wherein the first device  
24 includes a network server that is configured to act as an authentication  
25 server.

11.(original): The method as recited in Claim 10, wherein the second device includes a network server that is configured to act as an affiliated server associated with the authentication server.

12. (original): A computer-readable medium having computer-executable instructions, comprising:  
associating a first entity with a second entity in a first device; and  
causing the first device to selectively provided information about the association of the first and second entities to a second device when directed by the first entity, without requiring the second entity to be operatively associated with either the first or second device.

13.(original): The computer-readable medium as recited in Claim 12, wherein the first entity and the second entity are selected from a group of entities that includes users, organizations, companies, devices, computers, servers, computer programs, and applications.

14.(original): The computer-readable medium as recited in Claim 12, wherein the first entity includes a first user, the second entity includes a second user, and wherein without requiring the second entity to be operatively associated with either the first or second device includes without requiring the second user to be logged in to either the first or second device.

1 15. (original): The computer-readable medium as recited in Claim 12,  
2 wherein causing the first device to selectively provide information about  
3 the association of the first and second entities to the second device  
4 further includes providing the second device with a validation code that  
5 identifies the first entity and the second entity, when the first entity is  
6 operatively associated with the second device.

7  
8 16. (original): The computer-readable medium as recited in Claim 15,  
9 wherein the validation code identifies the second entity by an identifier  
10 and a name.

11  
12 17. (original): The computer-readable medium as recited in Claim 16,  
13 wherein the validation code identifies modifications to a consent  
14 parameter associated with the second entity.

15  
16 18. (original): The computer-readable medium as recited in Claim 15,  
17 wherein causing the first device to provide the second device with the  
18 validation code further includes encrypting at least a portion of the  
19 validation code.

20  
21 19. (original): The computer-readable medium as recited in Claim 12,  
22 wherein associating the first entity with the second entity in the first  
23 device further includes logically associating a first entity profile with a  
24 second entity profile.  
25

1 20. (original): The computer-readable medium as recited in Claim 14,  
2 wherein the first user is a parent/guardian of the second user.

3  
4 21. (original): The computer-readable medium as recited in Claim 12,  
5 wherein the first device includes a network server that is configured to  
6 act as an authentication server.

7  
8 22. (original): The computer-readable medium as recited in Claim 21,  
9 wherein the second device includes a network server that is configured  
10 to act as an affiliated server associated with the authentication server.

11  
12 23. (original): An apparatus comprising:  
13 memory having information associating a first user of the apparatus  
14 with a second user of the apparatus; and  
15 logic operatively coupled to the memory and configured to respond  
16 to inputs from the first user by selectively outputting the information about  
17 the association of the first user and the second user, without requiring the  
18 second user to be operatively signed-in to the apparatus.

19  
20 24. (original): The apparatus as recited in Claim 23, wherein the logic is  
21 configurable to be operatively connected to at least one external device  
22 and is further configured to selectively output the information within a  
23 validation code that identifies the first user and the second user, when  
24 the first user signs-in to the external device.  
25

1 25. (original): The apparatus as recited in Claim 24, wherein the  
2 validation code identifies the second user by an identifier and a name.

3  
4 26. (original): The apparatus as recited in Claim 24, wherein the  
5 validation code identifies modifications to a consent parameter  
6 associated with the second user.

7  
8 27. (original): The apparatus as recited in Claim 24, wherein the logic is  
9 further configured to encrypt at least a portion of the validation code.

10  
11 28. (original): The apparatus as recited in Claim 23, wherein the logic is  
12 further configured logically associate a first user profile with a second  
13 user profile in the memory.

14  
15 29. (original): The apparatus as recited in Claim 23, wherein the first  
16 user is a parent/guardian of the second user.

17  
18 30. (original): The apparatus as recited in Claim 23, wherein the  
19 apparatus is included in a network server that is configured to act as an  
20 authentication server.

21  
22 31. (original): The apparatus as recited in Claim 30, wherein the external  
23 device includes a network server that is configured to act as an affiliated  
24 server associated with the authentication server.  
25

1 32. (original): A computer-readable medium having stored thereon a  
2 data structure, comprising:

3 a validation code that identifies a first entity and a second entity.  
4

5 33. (original): The computer-readable medium as recited in Claim 32,  
6 wherein the first entity and the second entity are selected from a group  
7 of entities that includes users, organizations, companies, devices,  
8 computers, servers, computer programs, and applications.  
9

10 34. (original): The computer-readable medium as recited in Claim 32,  
11 wherein the validation code identifies the second entity by an identifier  
12 and a name.  
13

14 35. (original): The computer-readable medium as recited in Claim 33,  
15 wherein the validation code identifies modifications to a consent  
16 parameter associated with the second entity.  
17

18 36. (original): The computer-readable medium as recited in Claim 34,  
19 wherein at least a portion of the validation code is encrypted.  
20

21 37. (original): An apparatus comprising:

22 memory; and

23 logic operatively coupled to the memory and configured to allow a  
24 first entity to be operatively associated with the apparatus, and receive  
25 information about an association of the first entity and at least one other

1 entity, without requiring the at least one other entity to be operatively  
2 associated with the apparatus.

3  
4 38.(original): The apparatus as recited in Claim 36, wherein the first entity  
5 and the at least one other entity are selected from a group of entities that  
6 includes users, organizations, companies, devices, computers, servers,  
7 computer programs, and applications.

8  
9 39.(original): The apparatus as recited in Claim 36, wherein the first entity  
10 includes a first user, the at least one other entity includes a second user,  
11 and wherein without requiring the at least one other entity to be  
12 operatively associated with the apparatus includes without requiring the  
13 second user to be logged in to the apparatus.

14  
15 40. (original): The apparatus as recited in Claim 36, wherein the logic is  
16 configurable to receive the information about the association from an  
17 external device via a validation code that identifies the first entity and  
18 the at least one other entity, when the first entity is operatively  
19 associated with the external device.

20  
21 41. (original): The apparatus as recited in Claim 39, wherein the  
22 validation code identifies the at least one other entity by an identifier  
23 and a name.  
24  
25

1 42. (original): The apparatus as recited in Claim 39, wherein the  
2 validation code identifies modifications to a consent parameter  
3 associated with the at least one other entity.  
4

5 43. (original): The apparatus as recited in Claim 39, wherein the logic is  
6 further configured to decrypt the validation code, as needed.  
7

8 44. (original): The apparatus as recited in Claim 39, wherein, in  
9 response to the validation code, the logic is further configurable to  
10 output previously gathered information relating to the at least one other  
11 entity to the external device.  
12

13 45. (original): The apparatus as recited in Claim 38, wherein the first  
14 user is a parent/guardian of the second user.  
15

16 46. (original): The apparatus as recited in Claim 36, wherein the  
17 apparatus is included in a network server that is configured to act as an  
18 affiliate server.  
19

20 47. (original): The apparatus as recited in Claim 39, wherein the external  
21 device includes a network server that is configured to act as an  
22 authentication server.  
23  
24  
25
